

# D. Status of recommendations made in *Energy 2023* (Report 5: 2023–24)

Strengthen information system controls	Status
<p>1. With the evolving security threats and advancement in security controls and technology, we recommend that the energy sector entities:</p> <ul style="list-style-type: none"> <li>• limit the access to information systems provided to employees and third-party contractors to only what they need to perform their jobs</li> <li>• monitor activities performed by employees and third-party contractors who have access to sensitive data and can make changes within the system</li> <li>• fully assess the design and effectiveness of any new controls they implement to ensure they do not create control gaps in other parts of the information system security chain</li> <li>• update security settings in line with updated risk assessments, security policies, and better practices.</li> </ul> <p>We also recommend energy entities continue implementing the following recommendations, which we made in our <i>Energy 2020</i> report:</p> <ul style="list-style-type: none"> <li>• provide security training for employees so they understand the importance of maintaining strong information systems, and their roles in keeping them secure</li> <li>• implement strong password practices and multifactor authentication (for example, a username and password, plus a code sent to a mobile), particularly for systems that record sensitive information</li> <li>• encrypt sensitive information to protect it</li> <li>• patch vulnerabilities in systems in a timely manner, as upgrades and solutions are made available by software providers, to address known security weaknesses that could be exploited by external parties.</li> </ul>	<p><b>Further action needs to be taken</b></p> <p>While entities are implementing our recommendations to resolve the issues we reported to them last year, we identified similar internal control deficiencies this year.</p>
